

PROCESS START

6. Inspection

- 3D/2D coordinate measuring technology
- contour and roughness measurement
- analytical method of spectral analysis
- metallography
- hardness testing technology

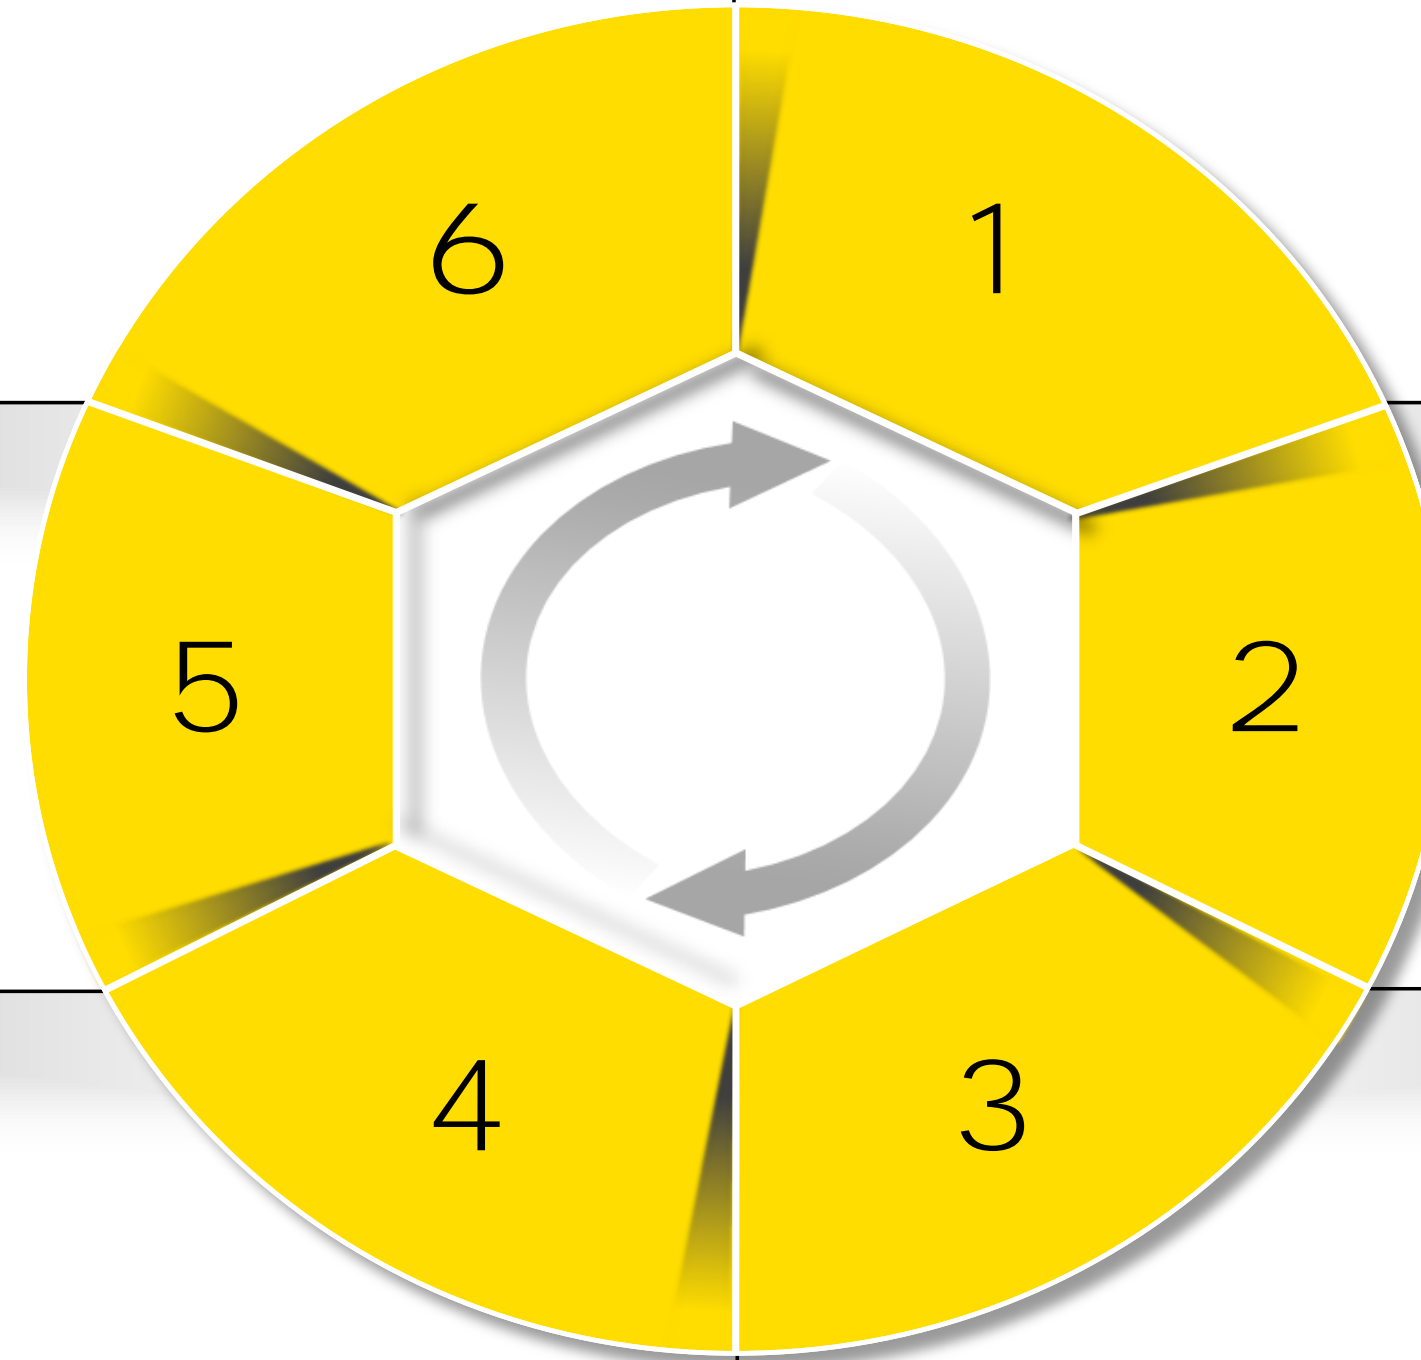

5. Post-Processing

- mechanical post-processing in case of tight tolerances and fits
- heat and surface treatment in cooperation with our partners
- component assemblies
- overmoulding of MIM components with plastic (insert/outsert technology)

4. Sintering

- batch sinter furnaces
- continuous furnaces

1. Feedstock supply

- selection and use of binder systems and metal alloys according to purpose or customer request

2. Injection moulding

- injection moulding machines with handling systems
- production cells as combination of injection moulding machine, robot systems and peripherals

3. Debinding

- production facilities for catalytic debinding process
- debinding production facilities for water-soluble binder systems
